

INDUSTRIES SERVED BY FREMONT

Fremont provides water treatment solutions for the Biofuels, Food and Beverage, Sugar Beet, Healthcare, Power Generation, Data Centers, Manufacturing, New Construction and Wastewater industries. Our programs are tailored to the unique challenges and demands of each industry as well as customized to your specific facility. We will work with you to develop a treatment program that meets your needs and will save you time and money.

FOOD AND BEVERAGE

As a leader in the Food and Beverage industry, Fremont has worked with all types of food processing customers to provide sustainable utility programs that minimize water and energy usage. Offerings also include FDA approved Glycols, Chlorine Dioxide, Peroxyacetic Acid Sanitizers, Process Additives and a variety of other product solutions.

WASTEWATER

We offer a complete line of influent and effluent water treatment programs that can be quickly modified to meet your changing needs. Along with polymers, coagulants, flocculants and sludge dewatering aids, we provide a broad range of metering and control equipment to meet your facility's specific requirements.

HEALTHCARE

Our highly trained team has years of healthcare industry experience including waterborne pathogen management in potable water, steam production for sterilization and cooling system Legionella control. Technologies provided for potable water include Chlorine Dioxide and Monochloramine chemistry.

NEW CONSTRUCTION

New construction start-ups require support, teamwork and experience- which are all key elements of Fremont's program. We will work with you in the field to make sure treatment systems are installed correctly and effective from the start. We streamline processes to provide a smooth installation experience for you and your team.

INDUSTRIES SERVED BY FREMONT

BIOFUEL PROVIDERS

Fremont has provided valuable products and services to the Biofuels industry since its inception. We understand that treatment plans, equipment and chemical requirements are unique to each plant therefore our product line is flexible and easily blended. We develop comprehensive, stage-by-stage cost/benefit analyses to provide you with the best program possible.

MANUFACTURING

We have a proven record in the manufacturing industry of reducing operating costs, minimizing downtime, improving production quality and enhancing asset life. Fremont operates as a team: your field representative will service your facility but you will also get support from our equipment, water treatment, engineering, customer service and laboratory specialists.

COMMERCIAL/INSTITUTIONAL

Energy costs are a big part of a typical facility's budget. It is imperative that heating and cooling equipment be kept in pristine operating condition. Our ongoing research efforts provide educational institutions with continuous opportunity for problem-solving, cost-reducing and cutting edge products.

GLYCOL SYSTEMS

We provide a complete line of inhibited and non-inhibited glycols, ranging from our 5-gallon containers to bulk container delivery. The product line ranges from 25% ready to use formulations to full strength 100% glycol offerings. Trained professionals are available for on-site testing to ensure that precise system conditions are maintained.

POWER GENERATION

With extensive experience and a broad range of products and services for each step of the power generation process, we can help manage your water treatment needs. We understand the issues that utility plants face regularly and will provide exceptional service and technical expertise.

Fremont Water Solutions has experience with most industries, some of which are listed here. Others include automotive, chemical processing, governmental, data centers, sugar beet, hotels and resorts, laundry, and municipalities.

So, whatever industry you are in, call and talk to a Fremont professional to see how we can help.
