

ULTRA GREEN TECHNOLOGY MOTHER NATURE APPROVED

Within the water treatment industry most products have been water based formulations—until now. Fremont re-invented its boiler, cooling and closed loop chemistries as a 100% active crystalline formula for an improved performance. Using Ultra Series products is convenient, safe and environmentally friendly.

ULTRA SERIES CRYSTALLINE PRODUCTS

This product comes in handy 3-gallon containers so the storage space required is dramatically reduced. And there is no longer a need for bulky drums or large totes to be hauled to a basement or up to a mezzanine to a tower or boiler. The handy containers can be easily taken to wherever they are needed in your facility.

Fremont's Ultra Series is highly concentrated. One 3-gallon container will reconstitute up to 55 gallons of water treatment formulation. And since they are made of number 2 plastic, the containers are 100% recyclable. The cardboard over-pack can be easily recycled through your city or county program.

Ultra Series products are also remarkably stable. Certain liquid formulations can start to break down soon after formulation. But Ultra crystals can be kept on a shelf indefinitely.

And you can order Fremont Ultra in whatever amount is convenient for you and your operation. Order one box or order ten boxes—whatever you need at any given time.

Safety is also increased with improved packaging and a convenient, innovative dispensing system. The 3-gallon containers have a handy screw-off top with an aluminum heat seal underneath. That means they are spill-proof, safe to handle and there is no skin contact.

The operator simply puts the container into the dispensing system with the aluminum seal in tact. When the container is in place, the seal is pierced and water is shot up into the container mixing the crystalline material together.

With Ultra Series products, improving safety and reducing your impact on the environment is easier than you think. Contact a Fremont professional today to learn more.

ULTRA GREEN TECHNOLOGY MOTHER NATURE APPROVED

ULTRA GREEN TECHNOLOGY: LINE OF PRODUCTS

Boiler

BWT 4150 Control of scale, deposition and corrosion in boiler systems utilizing hard make-up water. FDA Acceptable/USDA Compliant.

9522 Boiler alkalinity adjustment adjunct product. FDA Acceptable/USDA Compliant.

BWT 4350 Patented, phosphate-free, polymeric treatment for boilers employing softened, DI or RO make-up water.

RLT 4754 Return line treatment formulated to control condensate system corrosion. FDA acceptable/USDA compliant.

OXY 4556 Oxygen scavenger/metal passivator formulation. FDA acceptable/USDA compliant.

OXY 4558 Oxygen scavenger/metal passivator formulation. FDA acceptable/USDA compliant.

Cooling Tower

9573 Scale and corrosion control for aggressively corrosive tower water conditions.

9575 Scale and corrosion control for most cooling tower waters.

9577WR Scale and corrosion control—with patented white rust corrosion control.

9585 Scale and corrosion control inhibition for aggressively scale forming tower waters—with patented on-line scale removal technology.

9590 pH/alkalinity adjustment adjunct product.

9595 Scale and corrosion control inhibition for aggressively scale forming tower waters—with patented on-line scale removal technology and Molybdate tracer.

Miscellaneous

9510 Patented on-line scale removal formulation, which works synergistically with boiler and cooling tower products.

9550 Scale and corrosion inhibition in hot and chilled closed loop systems.

From our first customer in 1954 to the present, Fremont Water Solutions has provided specialty chemical, equipment and services of the highest quality and value to our customers. We deliver customer-focused, results driven technology designed to maximize the efficiency of your facility's operation.
